Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 95-131, and 134-142 drawn to OFDM transmitter and receiver environment, classified in class 370, subclass 208, 320, 330, 482 and 480.
 - II. Claims 132 and 133, drawn to a decoding method utilizing quantized samples, classified in class 704, subclass 500, 501, 502 and 503.
2. The inventions are distinct, each from the other because of the following reasons:
Group I communicating in an OFDM transmitter and receiver environment, whereas
Group II claims a decoding method that utilizes a deinterleaver circuit.
3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II and visa versa, restriction for examination purposes as indicated is proper.

Invention Group I and Group II are related as combination and subcombinations. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombinations as claimed for patentability, and (2) that the subcombinations has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a decoding method utilizing quantized samples and a deinterleaver circuit is not needed to

communicate data in an OFDM environment. The subcombination has separate utility such as communicating data in an OFDM environment.
